

Sigi FILAR, Film- and Video-Archive

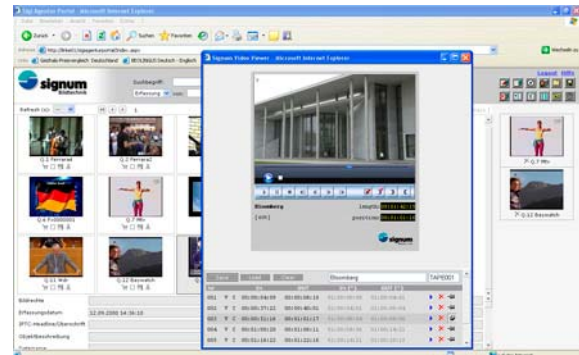

Archiving of film- and video-data

The need for fast access to film- and video-archives is steadily increasing. Many users are still ordering videos in DigitalBetacam format or viewing material on DVD. Creation of that material is time-consuming and costly.

Using Sigi Filar enables you to access films electronically and allows providing to third party.

Major Features

- Control and Ingest of MAZ machines
- Multi-channel with parallel record and play (like Read-while-Write)
- Support of all common HD and SD formats
- Support of all professional video file-formats like LXF, MXF, etc.
- Creation of EDLs via Web-Interface with proxy-video
- Simple play out from archive to MAZ (like DigitalBetacam, HDCam etc.)
- Support of AVID and FinalCut pro Non-Linear-Editing-Systems

- Correct use of time-code across the entire process from ingest over archive to finally play out
- Access to any graphic station of the SigiStudio series and optionally to devices from Quantel, Chyron and other manufacturer
- Support of MOS-Pools

Optional System Features

- Automatic creation of MAZ reports
- Automatic creation of XML-files with metadata, ready for import in other maker's systems
