VoD

Video on Demand Solution integrated in SIGI Studio

The Sigi Video on Demand solution offers the optimal integration to the Signum Content Management and Archive System. Via web-pages the contents can be generated automatically related to database information. The entire material-workflow is automatized and is taken over by the Content Management. Professional video-formats used in broadcast are fully supported and provided in different formats for the VoD Service.

The selection of VoD contents is controlled by metadata. Top10 and ranking lists are generated by the system automatically and are provided to the user via Web-browsers.

Contents of archives can be put into the Internet in a fully automatic way and is then available as Video on Demand Service

Important System features

- Available and newly generated Broadcast archives can be used for Video on Demand Solutions
- Support of various resolutions including SD- and HD-video
- Access to any graphic station of SigiStudio Series and optionally to devices from Quantel, Chyron and NLE-systems like Avid or FCP
- Making use of editors systems via the MOS protocol
- Control of access-rights and –permissions via a detailed access control administration
- Support of mobile services for the mobile device category
- User-right administration via „Geoprotection“
