

# MOTION

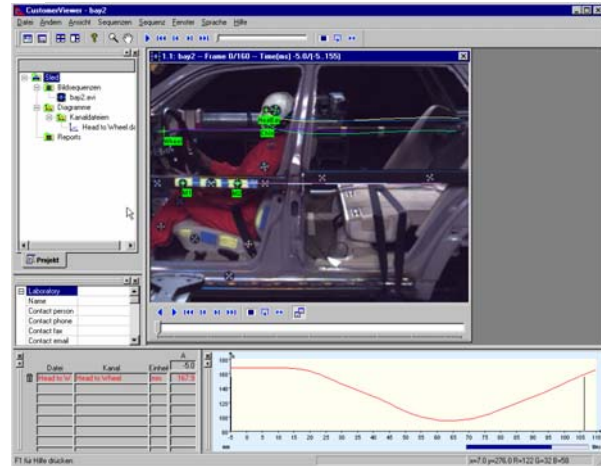

## *CustomerViewer*

Distribute test data together with integrated viewer software to your customers

The license is only valid for use of the software with image sequences created by . Use of software with other images is prohibited and may cause additional license fee payment!

### Product Brief

The **MOTION *CustomViewer*** is an option to MOTIONServer and MOTIONAnalysis software, to distribute all data of a test, stored in MME-format (multi-media exchange format) together with free running viewer software on CD-ROM or DVD for customer use.

Data are including single images, image sequences, like provided by electronic high speed video systems, film files (AVI-sequences), describing information about the test, results and also data of motion analysis, diagrams and external measurement channels.

During the creation of a data disk with integrated viewer, all included files are marked with a customer specific key. This enables the viewer, to display all stored data with standard MOTION functionality without the need for a specific software license.

The CustomViewer is also using a customer specific logo, to show information about the creator of the data.

After insertion of a disk into a drive with enabled autostart functionality, the system is showing a selection window, including all MME projects, stored on the CD/DVD. The viewer is then directly opening the selected project, to display the corresponding data.

You are also able to use the data without the integrated viewer, if other motion analysis or display software accepts the MME data structure. Or you directly access the image, sequence or result files without the need to interpret the MME format.

### Major Features

- **MOTION *CustomerViewer*** will be stored together with test data on CD-ROM or DVD
- MME-Format (Multi Media Exchange Format) is used for data storage
- Supports display of single images, image sequences, films, test results and diagrams
- Data will be marked with a customer specific key to enable the MOTION CustomerViewer to be used without the need for a specific license
- CustomerViewer includes a customer specific logo to show the source of data
